

Could you save £400 by making small changes to your home?

These energy efficiency tips could help you save a significant sum of money.

Using radiator thermostats efficiently could save £80/year. Use them to manage the heat in different rooms in your home.

Only boil what you need and save £7/year. Whether in a kettle or on the hob, only put as much water in as you need. It will boil quicker and save you money.

Good insulation could save £100s/year. Heat escapes through walls, floors and roofs. Check to make sure your home is well insulated.

Shorten your shower, save £8/year. Spending one minute less in the shower can save £8/year per person. If you have a water meter it could save another £12/year.

Switching lights and electricals off can save £50/year. Electrical goods are more efficient but standby mode still uses some power.

Say goodbye to estimates with smart meters. More information on smart meters can be found on our website www.rcab.org.uk/energy.

Switch to LEDs, save £35/year. LED bulbs give excellent light, save lots of energy and last for years.

Simple draught proofing could save £30/year. Check www.rcab.org.uk/energy for more information on how to draught proof your home.

Reduce washing machine use by one cycle a week and save £5/year. Reducing the temperature of the wash will save even more.
